Product Overview

The Wall Mounting Patch Brackets for 483 mm (19") installations are used for open mountings of 483 mm (19") components. They are available in several height units and can be stacked to suit to your individual needs of space. If needed the top and base can be closed with additional closing panels with cable brush. The brackets are adjustable in depth which makes the installation of larger components possible. A big cut-out area on the rear side can be used to guide cables which come directly from the wall. All patch brackets are delivered as flat pack to save space and transportation costs.
